Portfolio Insights

A quick narrative summary of concentration and diversification indicators.

Metric	Observation
Total Portfolio Value	Rs. 205,243.93
Total Holdings	15
Total Sectors	7
Total Industries	9
Largest Sector	Information Technology (38.88%)
Largest Industry	IT - Software (38.88%)
Top 2 Holdings Weight	55.63%
Top 5 Holdings Weight	74.69%
Diversification Score	Good
Concentration Risk	HIGH

Portfolio Returns vs Benchmarks

Absolute return of the current portfolio (same holdings, same quantities as today) had it been held for the trailing 3 months, 6 months, 1 year and 3 years, compared against the Nifty 50, Nifty Midcap 150 and Nifty 500 indices over the same windows. ETFs are excluded; only equity holdings are considered.

Prices as of 30 Jun 2026.

Portfolio Returns vs Benchmarks

3M: 100.0% of equity value covered | 6M: 100.0% of equity value covered | 1Y: 92.5% of equity value covered | 3Y: 90.7% of equity value covered

Nifty 50 history from 01 Jan 2021 | Nifty Midcap 150 history from 01 Jan 2021 | Nifty 500 history from 01 Jan 2021. A period longer than a benchmark's available history shows N/A.

Seven measurable modules

Risk Module Scorecard

Risk module	Score	Level	Risk scale	Coverage
Concentration	79.78	High		Complete
Sector	69.25	High		Complete
Market Cap	36.71	Low		Complete
Quality	15.42	Very Low		100.0% of eligible company value
Liquidity	6.41	Very Low		97.9% of portfolio value
Volatility	100.00	Very High		0%
Beta	100.00	Very High		0%
Overall portfolio risk	63.98	High		Weighted score

What drives each score

Concentration - 79.78 High

The largest holding is 28.42% and the top five represent 74.70%.
Coverage: Complete

Market Cap - 36.71 Low

Higher Small Cap, Micro Cap or unknown exposure increases market-cap risk.
Coverage: Complete

Liquidity - 6.41 Very Low

Higher average traded volume and turnover reduce exit-liquidity risk. Each stock is judged against its own cap-tier band, not one universal band.
Coverage: 97.9% of portfolio value

Beta - 100.00 Very High

Stock-return history was unavailable.
Coverage: 0%

Sector - 69.25 High

The portfolio spans 7 NSE sectors; the largest is Information Technology.
Coverage: Complete

Quality - 15.42 Very Low

ETFs are excluded from company-quality scoring. Interest Cover is Not Applicable for banks and financial institutions.
Coverage: 100.0% of eligible company value

Volatility - 100.00 Very High

Insufficient price history.
Coverage: 0%

Methodology note: configurable analytical indicators based on available portfolio, market, fundamental and NIFTY 50 data; not investment advice.

Stock Style Classification

Every holding is scored against Growth, Value, Momentum and Quality factors using percentile ranks against the full listed market universe, following Stock_Style_Rating_and_Scoring_Methodology_v1.docx. A style only becomes a holding's Primary or Secondary Style if it clears that style's minimum-metrics-passed rule. Volatility and Liquidity risk are reported separately in the Risk-O-Meter.

Fundamental data: latest Accord company filings. Price/momentum data as of 30 Jun 2026.

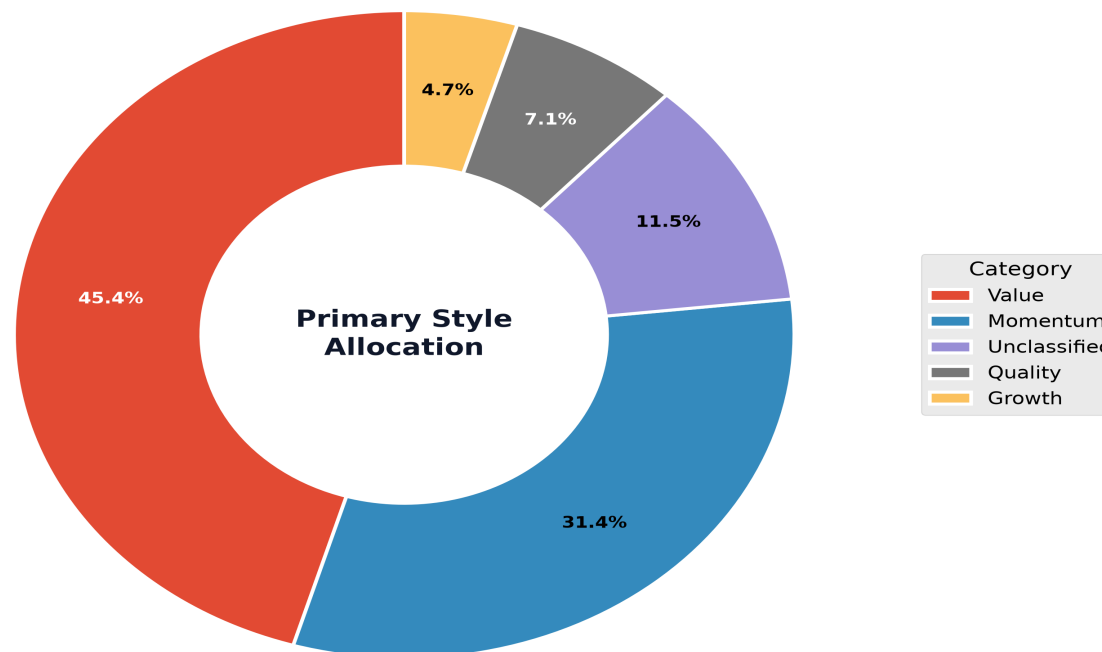

Overall Portfolio Style Profile

How much of each style the portfolio exhibits overall — the portfolio-weighted average score per style across every holding (regardless of which style each stock individually won). Coverage is the share of portfolio value with usable data for that style.

Style	Score	Profile	Coverage
Growth	54.6		90.6%
Value	62.7		97.9%
Momentum	42.8		97.9%
Quality	59.0		97.9%

Portfolio Style Mix

Portfolio Style Mix

Style	Number of Holdings	Portfolio Weight %
Value	5	45.41%
Momentum	3	31.35%
Unclassified	5	11.50%
Quality	1	7.06%
Growth	1	4.68%

Style Score Matrix

Every holding's score (0-100) against all 4 styles. A plain score means the stock is eligible for that style (cleared its minimum-metrics-passed rule). A score in parentheses means it was scored on complete data but did not qualify. A score marked with * means it is ineligible only because too few metrics could be computed for it -- most commonly a recently listed company that doesn't yet have the full history a style like Growth requires -- and should not be read as a genuine failing score. The highlighted cell is each holding's Primary Style.

Company	Growth	Value	Momentum	Quality
ICICI Bank Ltd.	64.4	(59.9)	70.8	55.5*
Wipro Ltd.	(49.6)	68.1	(11.7)	65.4
Raymond Realty Ltd.	N/A	74.7	91.2*	(64.3)
L&T Technology Services Ltd.	64.3	(49.2)	(17.7)	81.1
Aaron Industries Ltd.	79.8	(34.4)	(12.4)	60.1
63 Moons Technologies Ltd.	16.3*	71.1*	(21.6)	(28.1)
Gujarat Mineral Development Corporation Ltd.	61.0*	76.5	(57.2)	(70.4)
JM Financial Ltd.	(42.6)	82.2	(25.3)	(41.7)
GTL Infrastructure Ltd.	(17.7)	36.8*	(63.5)	(37.0)
Kotak Mahindra Bank Ltd.	(55.6)	55.6	(37.8)	48.0*
JIO Financial Services Ltd.	(35.6)	(40.3)	(21.6)	(51.1)
Edelweiss Financial Services Ltd.	(50.0)	67.8	79.1	(37.3)
NMDC Ltd.	64.9	77.5	81.1	77.3
NIP IND ETF GOLD BEES	N/A	N/A	N/A	N/A
NIPPONAMC - NETFSILVER	N/A	N/A	N/A	N/A

N/A means no metric for that style could be computed at all for that stock (e.g. no price history at all). * means the style couldn't be fully evaluated -- not enough metrics had data -- rather than the stock genuinely underperforming.

Methodology note: thresholds and weights are configurable in style_config.json. This classification is an analytical indicator, not investment advice.
